

Bonastre Melamine pads are ideal for everyday hard surface cleaning and maintenance. Great for porous surfaces like ceramic, marble, concrete, epoxy floors, resin floors and more.

Different sizes and shapes available for all kind of uses; mops, corners, and pads (for floor machines, scrubbers and orbital equipment).

In many cases, there's no need to add chemicals, only water, but in some cases adding an alkaline detergent or degreaser will help you save time.

## Durability

The coverage may vary depending on the surface type, condition and porosity. It's important to choose the right melamine pad for the type of surface. Test the pad to determine if it's the appropriate one for the job.

Coverage Orbipad Soft 15 m<sup>2</sup> to 500 m<sup>2</sup> / Orbipad Medium 300 m<sup>2</sup> to 3,000 m<sup>2</sup> / Orbipad Hard 1000 m<sup>2</sup> to 10,000 m<sup>2</sup>

*\*Results may vary depending on the equipment, surface type and condition.*

### Soft Melamine Pad

- Best cleaning results, less durability
- 100% pressed melamine.
- Ideal for ceramic, marble, clay tile, painted surfaces,
- To be used with lighter equipment on smooth floors, not recommended for rough surfaces
- To be used with floor polishers and floor scrubbers
- Test to determine its durability
- Not recommended for slippery floors
- Soak pad with water before using

### Medium Melamine Pad

- Most popular melamine pad, perfect balance between cleaning power and durability
- Ideal for porcelain, ceramic, stone, marble, epoxy, concrete and porous surfaces.
- To be used with floor polishers and floor scrubbers
- Requires a very small amount of water during the cleaning process.
- May use an alkaline cleaner or degreaser to achieve even more amazing results.

### Hard Melamine Pad

- Highest durability for large areas or rough surfaces
- Ideal for porcelain, ceramic, stone, marble, epoxy, concrete and porous surfaces
- To be used with floor polishers and floor scrubbers
- Requires a very small amount of water during the cleaning process.
- May use an alkaline cleaner or degreaser to achieve even more amazing results.

**AVOID THE USE OF CHLORINE OR ALCOHOL BASED CHEMICALS WITH BONASTRE MELAMINE PADS**

### CHARACTERISTICS

Similar to an eraser, is a mechanical cleaning process. The friction caused by the melamine pads release the dirt and filth from the microporous surface, without damaging it.

Not all the surfaces are the same, Bonastre is the only brand with 3 different melamine strengths to cover all of them. For example, if we use ORBIPAD SOFT in a rough and anti-slippery floor, the durability of the pad will be very short, so in this case, using a medium or hard pad will last longer.

### INSTRUCTIONS

- Melamine pads are for superficial cleaning. To remove deeper stains, add chemicals or use abrasive pads instead.
- To be used with floor machines or floor scrubbers, or even by hand.
- Must add water, do not use dry pads.
- About 90% of the times, water is enough to obtain great results. When needed, avoid using strong solvents, chlorine or alcohol-based chemicals.

### MELAMINE PADS TYPES

- There are 3 melamine pads with different strengths to choose for different types of surface roughness.
- For smooth surfaces or to be used with a lighter equipment, use ORBIPAD SOFT, Bonastre's highest cleaning power. Low durability for rough surfaces.
- Use ORBIPAD MEDIUM for rough or anti slippery surfaces. It requires more pressure to obtain the best results.
- For very rough surfaces or concrete, or if you want the highest durability, ORBIPAD HARD is the best choice. Highest durability but less cleaning power.
- Pads available on any size.

## DISCS AVAILABLE IN ANY MEASURE AND FORMAT
